

FT-1 FUSE TOOL INSTRUCTION SHEET

The FT-1 Fuse Tool is designed to assist the installation and removal of most cutout type overhead fuse links. It is constructed of a corrosion resistant bronze alloy switch hook, heavy duty schedule 80 PVC fuse receiver and stainless steel fasteners.

The FT-1 provides greater control of the fuse link during installation and removal. The cylindrical fuse receiver is slotted for clearance of the fuse link ring. When removing a fuse link the FT-1 minimizes the risk of dropping the fuse link by capturing the link in the receiver. The receiver maintains the fuse link in the direction of the force exerted to dislodge the fuse link from the cutout trunnion. When installing a fuse link the slotted receiver on the FT-1 improves installation onto the cutout trunnion by maintaining the orientation of the fuse link.

Instructions for Use:

1. Inspect the FT-1 for damage prior to and after each use. If damage is suspected, do not use and remove from service.
2. Follow all OSHA and company work rules and procedures at all times.
3. Use of a hotstick is required. Install the FT-1 on a company approved hotstick designed for the application and use intended.
4. Affix the FT-1 at the universal spline to the universal spline of the hotstick with the switch hook oriented at the top. Affix securely.
5. Use the switch hook to open and close the cutout. After the cutout is opened, remove the fuse link by sliding it into the fuse receiver of the FT-1. Place a new fuse link into the FT-1 fuse receiver, install the fuse link in the cutout trunnion and close the cutout to complete the installation.

WARNING: Hotstick is required. To be used by trained professionals with knowledge of high voltage electrical systems. Read all instructions, product labeling and follow company safety practices and OSHA regulations.

DANGER: Misuse or abuse of this product can lead to severe injury or death.
