FT-1 FUSE TOOL

The FT-1 Fuse Tool is designed to assist the installation and removal of most cutout type overhead fuse links. It is constructed of a corrosion resistant bronze alloy switch hook, heavy duty schedule 80 PVC fuse receiver and stainless steel fasteners.

The FT-1 provides greater control of the fuse link during installation and removal. The cylindrical fuse receiver is slotted for clearance of the fuse link ring. When removing a fuse link the FT-1 minimizes the risk of dropping the fuse link by capturing the link in the receiver. The receiver maintains the fuse link in the direction of the force exerted to dislodge the fuse link from the cutout trunnion. When installing a fuse link the slotted receiver on the FT-1 improves installation onto the cutout trunnion by maintaining the orientation of the fuse link.
