HD Electric Company Capacitor Testers

HDE's Cap Check line of capacitor testers is designed to identify internal problems with a capacitor or capacitor bank and have proven to be a valuable asset in maintaining both pole-mounted and substation capacitors. The testers identify bad or failing capacitors that may rupture upon energizing. Cap Check I and II are designed for pole mounted and individual capacitors and can enable a two-man crew to check a bank of 12 capacitors in about 20 minutes. Cap Check III (*shown here*) is specifically designed for checking capacitor units in substation banks.
