

HD Electric Company Capacitor Testers

HD Electric Company's Cap Check line of capacitor testers are designed to identify internal problems with a capacitor or capacitor bank and have proven to be a valuable asset in maintaining both pole-mounted and substation capacitors. The testers identify bad or failing capacitors that may rupture upon energizing. Cap Check I and II are designed for pole mounted and individual capacitors and can enable a two-man crew to check a bank of 12 capacitors in about 20 minutes. Cap Check III is specifically designed for checking capacitor units in substation banks.

To get more information visit the webpage for the Cap Check on our website – HDElectricCompany.com.
