

## HD Electric Company Load Box

HD Electric Company's Load Box helps to prevent the damaging effects of ferroresonance found on lightly or unloaded 3-phase power systems. This situation typically occurs on medium voltage distribution transformers and power cables during single phase switching. As the electric power industry moves towards more efficient transformer design, this condition is becoming more common. When using the Load Box to connect and apply a resistive load on the transformer secondaries, damage to distribution equipment due to ferroresonance can be prevented.

To get more information visit the webpage for the Load Box on our website – [HDElectricCompany.com](http://HDElectricCompany.com).
