NoMax® 1300/1600/2000 Series Capacitor Controls End of Life Notice

HD Electric Company will be discontinuing production of the NoMax 1300, 1600 and 2000 Series Capacitor Controls effective immediately and replacing them with VarCom® 1600 and 2600 Capacitor Controls. Our suppliers have informed us that a primary component (the microprocessor) for the controls is now obsolete and they have exhausted efforts to find a replacement.

HDE will fill any new NoMax control orders received with the equivalent VarCom 1600 or 2600 Capacitor Control that has the same form, fit and function as the NoMax 1300/1600/2000. The prices of the equivalent VarCom controls are the same as the NoMax controls.

The only change required by customers will be the need to use our VarWare® software for configuration purposes instead of the NoMax Version 5 software. VarWare software, datasheets and instruction manuals for the VarCom controls are available on HDE's website. Visit www.HDElectricCompany.com and type 'VarCom' in the search bar.

Please note that NoMax 900, 900T and 950 Series Capacitor Controls are not affected by this notice and will continue to be available.

If you have any questions, please contact your HD Electric Company representative or customer service at 847-473-4980.
