500kV Digital Voltage Indicators

HD Electric Company's **NEW DVI-500 Digital Voltage Indicators** are a new addition to our Digital Voltage Indicator line. The DVI is a direct contact, compact instrument designed to read the voltage on a conductor from 0.1kV up to 500kV line-to-ground and display the voltage on a large 3-digit ultra-bright LED display. The display is easy to read on the end of a long hotstick and can be used on overhead lines or in underground applications. The DVI-500T can also measure Elbow Test Points. An audible indication is given when voltage is detected, and allows the user to distinguish between nominal and induced voltages. For more information on the DVI Series Digital Voltage Indicators as well as the rest of HDE's product line, please visit our website at www.HDElectricCompany.com.
