Product Change Notification

Important Upgrades and Changes to the DVI-100 Product Line

Due to a policy of continuous improvement, important changes have been made to the DVI-100 Digital Voltage Indicator product line. A summary of the changes are: a new, lighter weight housing; improved shielding of the electronics; a larger and more robust thread diameter on all accessory probes; a newly designed Proof Tester and carrying case.

The changes to the DVI do not affect the performance nor change the operating characteristics from previous DVI you may currently be using.

Please be aware of the following changes:

1. Probes are **not** interchangeable between older and newer DVI-100.
2. The new DVI-100 housing is slightly larger and **will not** fit into the old case.
3. DVI-100 accessories **will** continue to be available for DVI-100 manufactured prior to January, 2010.

Old Part Number	New Part Number	Description
 DVI-100	 DVI-100	Indicates Voltage up to 99kV, includes HP-DVI-2 and CS-DVI Case. <i>Note: To distinguish between versions check the universal spline area (see arrows) for ribs. If present, this is the new version.</i>
 HP-DVI	 HP-DVI-2	Overhead Hook Probe, 2" diameter opening. <i>Note: The new probe has 4 finger lobes on the black knob and a part number label.</i>
 IEP-DVI	 IEP-DVI-5	Underground Bushing Probe, 15, 25 & 35kV Class
 PT-DET	 PT-DVI	Proof Tester for Digital Voltage Indicators. <i>Note: The PT-DET and PT-DVI will work with all DVI-100. This change was made for the new DVI-500 series, which will only work with the PT-DVI.</i>
 CS-DVI	 CS-DVI	Rugged Plastic Carrying Case for DVI-100. <i>Note: The new case is one inch taller, two inches wider and one quarter inch deeper. The new DVI-100 will not fit into the older case.</i>

Please contact HD Electric Company with any questions.
