## **Digital Voltage Indicator**

HD Electric Company's **NEW DVI Digital Voltage Indicator** is a direct contact, compact instrument designed to read the voltage on a conductor up to 99kV line-to-ground. The large 2.5 inch tall, ultra-bright LED display is easy to read on the end of a long hotstick and can be used on overhead lines or in underground applications by contacting the conductor and reading the display. The DVI gives an audible indication of voltage detected, and allows the user to distinguish between nominal and induced voltages. For more information on the Digital Voltage Indicator as well as the rest of HD's product line, please visit HD's website at [www.HDElectricCompany.com](http://www.HDElectricCompany.com).
