New Style Bushing Probe for TAG 200, 200MR, & 5000 Part No. IEP-UD/C Replaces IEP-UD/R

HD Electric has improved the design of the bushing probe that is used with the TAG 200 & TAG 200MR voltage detectors, and the TAG 5000 Wireless Phaser. The new probe, part# IEP-UD/C, performs the same function as the existing probe, part# IEP-UD/R, with improved capability.

The improvements to this new probe are:

- expanded voltage range (it can be used on higher voltages, up to 35kV system voltages)
- it attaches to the TAG without removing the plastic retaining nut
- it is shorter in length

Our records indicate that your company may have purchased the IEP-UD/R in the past. ***We are discontinuing the IEP-UD/R probe. Please be sure to update your system with this change.*** This new probe is now available and is ready to ship. Please contact us if you have any questions.

IEP-UD/C
