HD's **NEW PT-5000W High Voltage DC Leakage Tester** is a general purpose dual voltage leakage tester designed to test primary distribution voltage or secondary voltage equipment for faults or high leakage currents. The PT-5000W can only be used on cables or equipment that has been verified to be de-energized and discharged.

The test voltage can be set by the user to either 500 VDC or 5,000 VDC. The portable PT-5000W can be used to check for leakage on cables, transformers, capacitors, joints, terminations, insulators, etc.

For more information on the PT-5000W High Voltage DC Leakage Tester, visit our website at <http://www.hdelectriccompany.com/pt5000w.htm>.
